

# Conestoga-Rovers & Associates Project Summary

## KEY PROJECT ELEMENTS

- **Source Separation Organic**
- **Engineering Studies**
- **Facility Design**
- **Construction Inspection**

## SOURCE-SEPARATED ORGANICS (SSO) FACILITIES TORONTO, ONTARIO

CRA is engaged in the engineering studies, preliminary design, construction oversight, contractor procurement, and warranty support for two 55,000 tonne/year anaerobic digestion facilities for the City of Toronto.

This work includes geotechnical, odour, electrical, HVAC, biogas utilization, site servicing, stormwater control, and logistics studies involved in the development of these projects over the next four years.

These projects will take source-separated organic wastes generated in the City and create a renewable energy product. CRA will act as the City's engineer to oversee contractors, including on-site inspection for the duration of the three-year construction program at the sites.
