

Conestoga-Rovers & Associates **Project Summary**

KEY PROJECT ELEMENTS

- **Engineering Review of Ongoing and Legacy Liability**
- **Critical Analyses of Cost Estimates and Life Cycle Costs**
- **Identifying Alternate Remedies and Outcomes**
- **Determining Probabilistic Outcomes and Values**
- **Developing or Assessing Management Estimates of Cost**

ENVIRONMENTAL LIABILITY VERIFICATION AND ENVIRONMENTAL RESERVE SUPPORT UNITED STATES

CRA has regularly been retained as the expert and litigation consultant in multi-site and multi-party matters. CRA typically reviews the adequacy of the work completed to characterize the site and then independently assesses the cost estimates developed so as to render an opinion about the ultimate environmental liability and exposure.

A chemical company retained CRA to provide an independent third party review of the environmental liability estimates and the statistically based expected value of the potential environmental liability. CRA's work product is being used in the sale of the company.

CRA was retained to assist a chemical company's assessment of the adequacy of its merger target's environmental liability assessments. CRA was integrated into the management team that assessed the supporting documentation for the liability assessment and verified the adequacy of the liability cost estimates by preparing independent estimates. This work product was used in the final merger negotiations.

CRA was retained by another client to assist in its acquisition of seven sulfuric acid production plants in the United States. The project involved independent review of another party's environmental liability cost estimates and the development of an independent estimate for use in the negotiation of the transaction.
